

# CLOUDED LEOPARD ADAPTATIONS

## BIGGEST TEETH?

Clouded Leopards have the biggest canine teeth relative to their body size. They can be two inches or longer! They can be nearly as long as a tigers tooth!

## "CLOUDED" FUR

Clouded Leopards have beautiful tan fur with okra and black spots, blotches, and stripes. These patterns allow them to blend into their surroundings to help them hide in their forest habitats.

## LONGEST TAIL?

Clouded Leopard tails are the longest in proportion to their body length. They can range between 24 inches and 33 inches when fully grown. These long tails help them balance in the trees.

## FELXIBLE ANKLES

Clouded Leopards can rotate their ankles backwards. This lets them climb face-first down trees to help them jump on any prey items below them.

## BOYS VS GIRLS

Male and female Clouded Leopards look different, or are sexually dimorphic. Males are much larger and their paws can be the size of a Mountain Lion. Females are much smaller, about half the size of males.
